SALEH AYMAN SALEH MOHAMED

CYBERSECURITY ENGINEER

+20 112 695 9797 • salehaymansaleh81@gmail.com • Benha, Al-Qalyubia, Egypt

LinkedIn • GitHub

PROFESSIONAL SUMMARY

Computer Science (Computers & Artificial Intelligence) student at Benha University (GPA 3.7/4.0), focused on Security Operations and hands-on blue-team skills. Building SOC tooling with Wazuh, Sysmon, and Python; publishing CTF and security-lab write-ups; and delivering Python tools for freelance clients.

TECHNICAL SKILLS

Security Operations: Wazuh, Sysmon, SIEM correlation rules, alert triage, incident-response fundamentals, MITRE ATT&CK

Forensics & Analysis: Network traffic analysis, memory analysis, malware analysis, CTF investigations

Networking: TCP/IP, routing and switching fundamentals (CCNA coursework)

Programming & Tools: Python (FastAPI, Pandas, NumPy, scikit-learn, cryptography), C++, Java, SQL, JavaScript, HTML/CSS, Ollama (local LLMs)

Data Engineering: ETL pipelines, Kafka, Spark, Airflow

Soft Skills: Analytical thinking, attention to detail, problem-solving, technical writing and communication, teamwork, time management, adaptability

Languages: Arabic (Native), English (Intermediate)

CYBERSECURITY PROJECTS

VIGIL — AI-Assisted SOC Triage | In Progress

Wazuh · Sysmon · Python · FastAPI · Ollama · MITRE ATT&CK

GitHub: github.com/SalehAyman55/mini-soc-ai-triage

- Building a local SOC pipeline: Wazuh detects activity, a local LLM returns structured triage verdicts mapped to MITRE ATT&CK, and an analyst approves every response.
- Implementing guardrails (schema validation, action allow-list, protected IPs, audit logging) and benchmarking local models with precision, recall, and F1.

SIEM Detection Engineering, Alert Triage & SOC Operations | In Progress

SIEM · Correlation Rules · SOAR · Threat Intelligence · MITRE ATT&CK

- Designing SIEM architecture and log onboarding; developing correlation rules for brute force, lateral movement, persistence, and data exfiltration, with false-positive tuning.
- Building a SOC dashboard (MTTD, MTTR, alert volume) and a phishing-response SOAR playbook with threat-intelligence enrichment and AI-assisted triage.

LABS & CTF WRITE-UPS

CyberDefenders — Lockdown Lab (CTF Write-up) | Completed

Network traffic · Memory analysis · Malware artifacts

GitHub: github.com/SalehAyman55/CTF-Writeups--CyberSecurity • **Medium:** medium.com/@salehaymansaleh81

- Reconstructed a multi-stage intrusion from network traffic, memory, and malware artifacts, and documented the investigation in a detailed write-up.

TryHackMe | Ongoing

Profile: tryhackme.com/p/thejackal81

- Hands-on labs and self-directed learning, with walkthroughs published on Medium / GitHub.

Hack The Box | Ongoing

Profile: Hack The Box — thejackal81

- Hands-on labs and self-directed practice.

EXPERIENCE

Freelance Developer — Python & Security Tools Dec 2024 – Present

Independent client work

- **Media Magnet:** developed and delivered a Python media application for a client.
- **File Security Tool:** built a Python utility to encrypt and decrypt PDFs and other file types, with added file-handling features for protected content.
- **Video Conversion Tool:** built a converter for major video formats with HEVC (H.265) encoding, integrated into a separate media application.

Trainee — DEPI, Cyber Security Incident Response Jul 2026 – Present

Infrastructure & Security track · Incident Response Analyst

- Training in networking, operating systems, attack techniques, incident response and forensics, and SIEM/SOC automation; capstone projects are VIGIL and the SIEM detection project above.

Trainee — Digital Egypt Pioneers Initiative (DEPI) Jun 2025 – Jan 2026

Microsoft Data Engineer (AI & Data Science) track

- Trained in Python, SQL/NoSQL, ETL pipelines, big data, and cloud fundamentals; contributed to a team project, Smart Living Advisor (below).

ADDITIONAL PROJECTS

Smart Living Advisor — DEPI | Team project 2024

FastAPI · React · PostgreSQL · scikit-learn · JWT / OAuth 2.0 · Google Maps API

GitHub: github.com/amr-mohamed13/SmartLivingAdvisor

- Contributed to a full-stack AI real-estate platform with a content-based recommender using cosine similarity, a weighted livability-scoring model, and secure authentication.

Pasta Restaurant Management System | University project 2025

Java · Swing · NetBeans

GitHub: github.com/SalehAyman55/pasta-restaurant

- Designed and built an end-to-end restaurant management system covering ordering, menu management, and billing, from requirements and database design through implementation.

EDUCATION

B.Sc. Computer Science (Computers & Artificial Intelligence) Sep 2024 – Expected 2028

Faculty of Computers and Artificial Intelligence, Benha University | GPA: 3.7/4.0

COURSES & CERTIFICATIONS

Microsoft Data Engineer (AI & Data Science) — DEPI | Certificate Jul 2025

CCNA Course | Networking fundamentals | Instructor: Eng. Abeer Hosny 2026
